

## **Because the bottom line is what matters**

Sharp Software Solutions is a small software development and consulting firm located in central Minnesota. We pride ourselves in mastering the latest technologies and using our knowledge to help our clients be successful. We help clients improve their bottom line by providing top quality applications that automate business processes, provide business metric reports, and minimize user interaction with the system.

**At Sharp Software Solutions we understand that the aim of software applications is to establish an efficiency of process that decreases opportunity costs, resulting in savings and bottom line growth.**

Most of our development projects are completed at our office. This enables our clients to maintain their current office environment while delivering a superior solution. Our development environment works best offsite mainly because it allows our developers to concentrate on the task at hand, and allows them to tap into the technical resources at our office. We have found that the offsite approach works great with our Agile and RAD development processes. However, if required we can supply onsite resources at your request. In any case we like to maintain a long-lasting relationship with our clients, and we accomplish this by making the software development process as trouble-free as possible. Using our development methodologies, technologies, and senior staff we are able to deliver top of the line software applications.

## Websites

If you need a professional website that utilizes all of the latest technologies, you have come to the right place.

### Website Development

Your website is the first impression the customer gets from your company, so let's make that first impression a powerful one. Sharp Software Solutions will deliver a professional website that is designed to meet your organization's needs. We specialize in creating websites for small to medium size companies and we have a solution that is right for you. We install, upgrade, and support all of our web solutions. All solutions are architected by our senior software architect, and all web development is led by one of our senior web developers. Unlike some companies, our web sites are created using the latest technologies such as: ASP.Net, AJAX, C# 3.5, Adobe Photoshop CS2, and Flash. Give us a chance to improve your bottom line by creating a professional website that will attract business away from your competitors.

### Website Update or Upgrade

We can add functionality, support, or migrate your current website to the new Microsoft .Net platform. Let us upgrade you to a professional website that is both visually appealing and user friendly.

### Windows Applications

If you have a need for a process intensive, internal application, a Windows based application is right for you.

## Windows Application Development

Sharp Software Solutions can take complex business requirements and build a Windows application that is extremely user-friendly. We use all of the latest Microsoft technologies including: Windows forms, smart clients, user controls and C# 3.5. All solutions are architected by our senior software architect, and all Windows application development is led by one of our senior Windows application developers. We have the resources to develop applications of any size, and we would love to have the chance to design and develop a software application that meets your business needs.

### Windows Application Upgrade

We can upgrade any software application, written in any language to the latest technology. If you have a dated DOS, VB, PowerBuilder, Java, etc. application, we can migrate to the new Microsoft .Net platform!

### Framework Architecture

All of our Windows and web applications are built on top of either an Object Oriented (OO) or a Service Oriented Architecture (SOA) Framework. We let you choose which one would fit best with your organization.
